DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, drawn to a method of identifying a gene having a role in the presentation of diabetic nephropathy.

Group II, claim(s) 8, drawn to a method of using a gene having a role in the presentation of diabetic nephropathy as a diagnostic marker for the progression and presentation of diabetic nephropathy.

Group III, claim(s) 9, drawn to a method of using a gene having a role in the presentation of diabetic nephropathy as an index of disease activity and the rate of progression of diabetic nephropathy.

Group IV, claim(s) 10, drawn to a method of using a gene having a role in the presentation of diabetic nephropathy as a basis for identifying drugs for use in the prevention and/or therapy of diabetic nephropathy.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Each of the Inventions is directed to methods applied to unrelated purposes. That is, the method of Group I is directed to discovering genes, the method of Group II is directed to diagnosis, the method of Group III is directed to scoring disease activity and Group IV is directed to a method of drug discovery. Clearly the method of Group I lacks unity with the methods of Groups II-IV because Group I is not directed to using any particular molecule. The methods of Groups II-IV are each distinct methods of using a potentially vast and disparate set of molecules, each of which constitutes a unique invention. Therefore none of the inventions share a common and distinct special technical feature.

Art Unit: 1636

Further, because each of the nucleic acids disclosed in the Application are structurally and functionally distinct molecules and thus lack a unifying special technical feature, claims directed to methods of identifying or using individual nucleic acid sequences lack unity. Therefore, claims comprising distinct nucleic acids are distinct inventions. Applicant must select a single nucleic acid selected from the group consisting of SEQ ID NO:1-6 to which examination will be restricted. This is not an election of species requirement.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel M Sullivan whose telephone number is 703-305-4448. The examiner can normally be reached on Monday through Friday 8-4:30.
